

SUMMER CONSERVATION TIPS

Below are practical tips for residential and commercial electricity customers to help conserve electricity during periods of high demand.

RESIDENTIAL

- Raise air conditioning thermostats by a few degrees.
- Shut off air conditioners when leaving home for an extended period of time.
- Turn off unnecessary lights and appliances.
- Defer laundry until evening hours.

COMMERCIAL

- Raise air conditioning thermostats by a few degrees.
- Turn off unnecessary lights, non-essential computers and equipment, and if feasible, 50 percent of the copiers.
- Consider using battery-powered laptop computers in place of desktops or docking stations.
